Please add the following text as the abstract for the above mentioned application filed herewith:

ABSTRACT

Disclosed is a hood (1) for a convertible (2), comprising a tail end/roof segment (6) and at least one other roof segment (7, 8). The roof segments (6, 7, 8) can be folded together in a Z-shape by means of a folding mechanism and at least the tail end/roof segment (6) is provided with a flexible roof skin (3) which is accommodated between opposite outer roof profiles (9, 10, 11) which are symmetrical in relation to a longitudinal axis (33) of the vehicle and which encloses a dimensionally stable rear window (12). The rear window (12) and the outer roof frame profiles (9), which are associated with the tail end/roof segment (6), are placed in a folded position when the hood (1) is open or unfolded from said position as a result of a movement in the same direction.
